

### Hybrid Bi-Sector<sup>™</sup> Array

#### HBSA-M65R-DU-H6

#### DATA SHEET

- Six foot (1.8 m), six port, hybrid antenna featuring a single low band beam and dual high band beams with patented asymmetrical beam shapes optimized for LTE
- Two independent 33° beams to match existing 65° patterns, covering 1710-2400 MHz and a single 65° beam covering 790-960 MHz
- One pair of +45° and -45° cross-polarized ports for each beam
- Slim and low weight single panel design supporting three beams in a single antenna
- Field replaceable, integrated AISG 2.0 compliant Remote Electrical Tilt(RET) system with independent tilt control for each beam
- Dramatic increase in site capacity through higher order sectorization which offsets the need to build new sites
- Boosts data throughput by minimizing interference and optimizing coverage
- Sharp elevation beamwidth aides in network planning
- Optimal elevation sidelobe performance
- Exceeds minimum PIM performance requirements

#### Overview

CCI's unique hybrid multi-band Bi-Sector<sup>TM</sup> array is a combined dual and single beam antenna with full Cellular, PCS 1900 MHz, AWS 1710/2170 MHz and WCS 2300 MHz band coverage. With two pairs of 33° high band ports covering 1710-2400 MHz and one pair of 65° low band ports covering 790-960 MHz, this six foot (1.8 m) CCI hybrid Bi-Sector<sup>TM</sup> provides the capability to deploy two high band beams (sectors) and one low band beam (sector) in a single antenna. The Remote Electrical Tilt (RET) allows separate tilt control for each beam individually, enabling maximum flexibility in network deployment.

CCI's unique patented bi-sector technology provides optimized overlap between the pairs of asymmetric beams, lowers soft handover losses in LTE, UMTS/HSPA+ and CDMA/EVDO systems, while minimizing interference between sectors. Fast-roll off of each of the outer beams and high front-to-back ratios ensure reduced interference. This patented approach enhances data transfer rates within LTE, UMTS and EVDO network sectors and addresses "hotspots" in mobile wireless operator networks.

The single panel design of the Bi-Sector<sup>TM</sup> Array offers the opportunity to reduce antenna count and directly replaces an existing 65° antenna without mount changes and avoids costly leasing and zoning changes. The enhanced coverage matches the existing sector footprint and minimizes the need for optimization and adjacent site changes, providing operators with significant CAPEX and OPEX cost savings.

CCI antennas are designed and produced to ISO 9001 certification standards for reliability and quality in our state-of-the-art manufacturing facilities.

## Antennas

### Hybrid Bi-Sector<sup>™</sup> Array

#### HBSA-M65R-DU-H6

Applications

- Delivers increased capacity and data-throughput for sites that are performance or capacity constrained
- Provides a higher level of spectrum reuse making it an ideal solution for spectrum limited markets
- Increase capacity without the need for new site builds or carrier adds and without using valuable spectrum resources
