

DISCLAIMER:

The installation, maintenance, or removal of an antenna requires qualified, experienced personnel. You must refer to the appropriate local safety codes and ensure proper electrical and electromagnetic compatibility before proceeding with the installation. All local codes shall take precedence over information in this document. Antenna systems should be inspected once a year by qualified personnel to verify proper installation, maintenance, and condition of equipment. The maximum static load for a single antenna attachment position is 77.5 kg. Communication Components Antennas Inc. disclaims any liability or responsibility for the results of improper or unsafe installation.

Swiveling MDT Mounting Kit Installation Guide (MBK-19)

Step Task

1 The Mounting Kit is intended for antennas with a pitch of 700mm between hinge brackets. It will provide mechanical tilt capability of 0°-20°, and azimuth swiveling of ±30°. The Fixed Bracket only provides swiveling, while the Adjustable Bracket provides tilt and swiveling. The Brackets will arrive assembled for the Downtilt Setup, but the hardware will not be torqued.

Step	Task	Step	Task
2	Attach the Fixed Bracket by separating one Clamp Bracket from the assembly, by removing some of the associated hardware (see Fig. 3). Place the Bracket on the mast at the correct height in the orientation shown, and also pointing in the desired direction as shown in Fig. 3. Reinstall the Clamp Bracket and the associated hardware. Adjust the M12 threaded rods to balance the protrusion on either side and tighten the M12 nuts to a torque of 54 ± 2.5 N-M (40 ± 2 ft-lbs.). Then tighten all eight M8 nuts (on the underside) to a torque of 9.5 ± 0.5 N-M (7.0 ± 0.5 ft-lb.)	3	Attach the Adjustable Bracket by separating one Clamp Bracket from the assembly, by removing some of the associated hardware (see Fig. 4). Place the Bracket on the mast in the orientation shown in Fig. 5, at a distance of 700mm from the Fixed Bracket (depends on tilt direction) and also pointing in the same direction as shown in Fig. 6. Reinstall the Clamp Bracket and associated hardware. Adjust the M12 threaded rods to balance the protrusion on either side and tighten the M12 nuts to a torque of 54 ± 2.5 N-M (40 ± 2 ft-lbs.). Then tighten all eight M8 nuts (on the underside) to a torque of 9.5 ± 0.5 N-M (7.0 ± 0.5 ft-lb.)

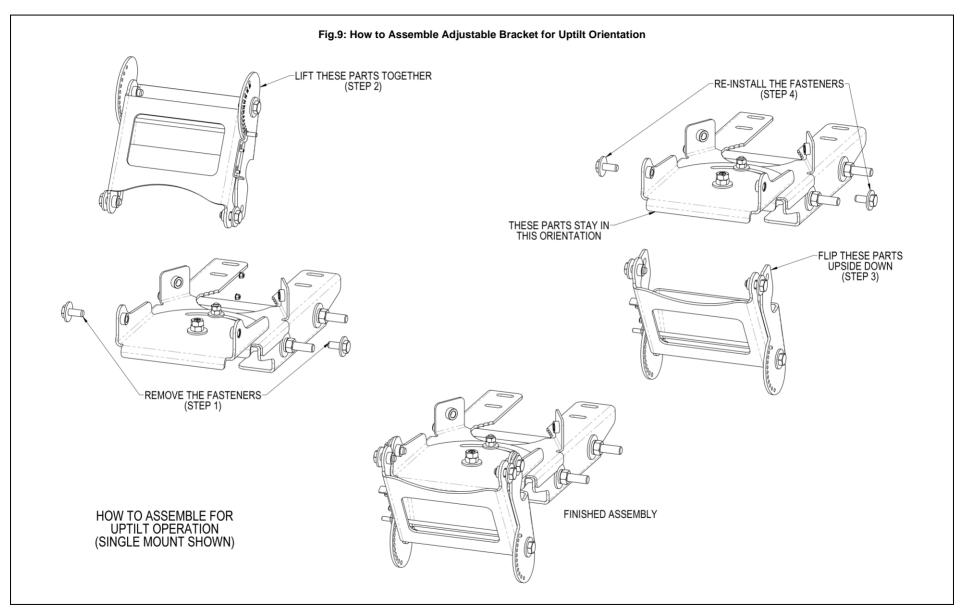

Step Task

4 Install the antenna/radio assembly on to both the Fixed Bracket using 2 pcs. each of the M10 hardware, and the Adjustable Bracket using 2 pcs. each of the M10 hardware as shown in Fig. 7. Torque M10 hardware to 25±1.5 N-M (18.5±1.5 ft-lbs.). If further alignment is required loosen the M12 hardware holding the mast brackets in place and adjust the alignment of the antenna/radio assembly in the direction specified by the site engineer. The orientation of the Antenna is normal to the sector unless specifically required otherwise.

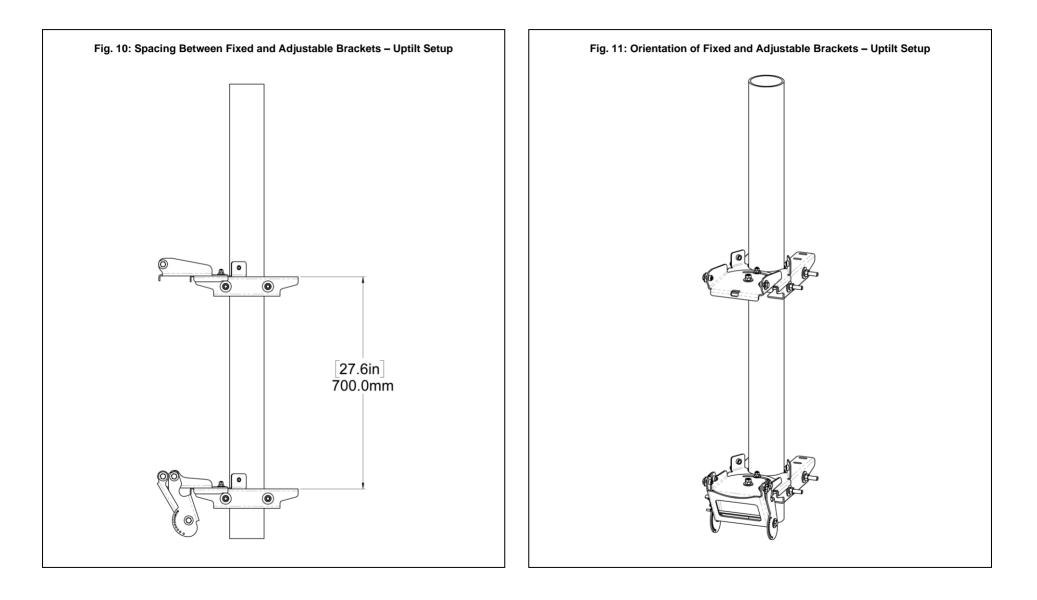

Step Task

- 5 Once properly aligned torque M12 clamp hardware to 54±2.5 N-M (40±2 ftlbs.).
- 6 Completed installation with 0° MDT (Mechanical Tilt) should appear as shown in Fig. 8.

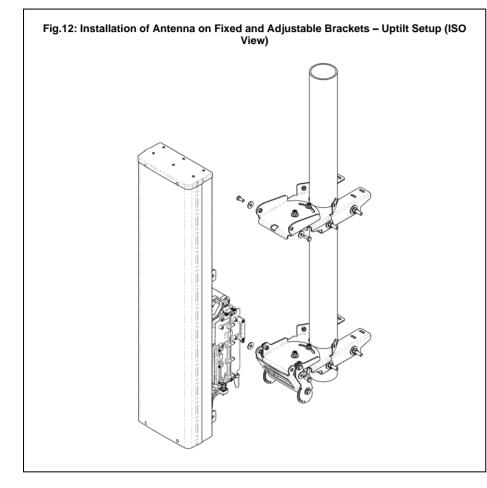

Swiveling MDT Mounting Kit Installation Guide (MBK-19)

Step Task

4 Install the antenna/radio assembly on to both the Fixed Bracket using 2 pcs. each of the M10 hardware, and the Adjustable Bracket using 2 pcs. each of the M10 hardware as shown in Fig. 12. Torque M10 hardware to 25±1.5 N-M (18.5±1.5 ft-lbs.). If further alignment is required loosen the M12 hardware holding the mast brackets in place and adjust the alignment of the antenna/radio assembly in the direction specified by the site engineer. The orientation of the Antenna is normal to the sector unless specifically required otherwise.

Step Task

5 Once properly aligned torque M12 clamp hardware to 54±2.5 N-M (40±2 ftlbs.).

6 Completed installation with 0° MDT (Mechanical Tilt) should appear as shown in Fig. 13.

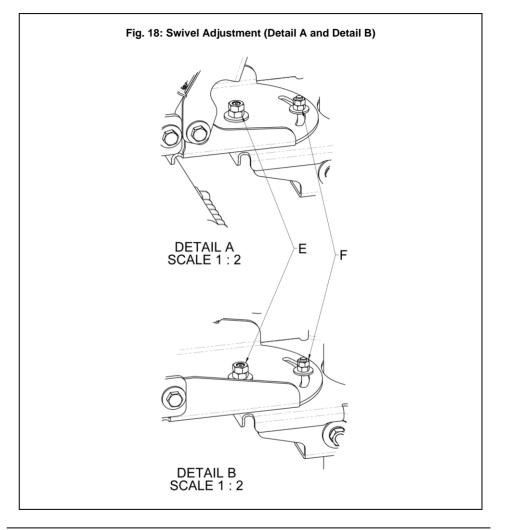

Swiveling MDT Mounting Kit Installation Guide (MBK-19)

Step Task

11 To adjust the azimuth direction, loosen the four M10 nuts labeled "E," and the four M8 nuts labeled "F." Simply rotate the antenna to the desired direction and tighten the four M8 nuts to a torque of 9.5±0.5 N-M (7.0±0.5 ft-lbs.). Then tighten the four M10 nuts to a torque of 25.0±1.5 N-M (18.5±1.5 ft-lbs.). This can be done at any MDT setting.
